

# Project Overview: "Adaha"

## 1. Project Definition

"Qadha" is a sophisticated digital platform dedicated to the professional and social empowerment of People with Disabilities (PWDs). The project adopts a **"Skills-First Approach,"** connecting users to job opportunities based on their actual capabilities and potential, rather than categorizing them by the nature of their disability.

## 2. The Challenge

People with disabilities face significant barriers in the labor market:

- **Marginalization:** Evaluating individuals based on perceived "deficits" rather than talent.
- **Lack of Accessibility:** Most current recruitment platforms do not meet international web accessibility standards.
- **The Training Gap:** A shortage of tailored vocational programs that prepare individuals for real-world workplace integration.

## 3. The Solution & Innovation

The platform offers a unique user experience centered on dignity and efficiency:

- **Smart Onboarding:** An intelligent registration journey that explores skills and the ideal working environment without focusing on medical labels.
- **Ability-Based Matching:** A search engine that matches job requirements with available workplace accommodations (e.g., sign language support or wheelchair-accessible facilities).
- **Inclusive UX:** Interfaces designed with maximum accessibility standards (high contrast, screen reader compatibility, and clear typography) to ensure ease of use for everyone.

## 4. Key Objectives

- **Economic Empowerment:** Providing sustainable and real career opportunities.
- **Social Inclusion:** Building a bridge of trust between diversity-conscious companies and creative talents from the disability community.
- **Shifting Perspectives:** Changing the narrative from "need" to "achievement" through a dedicated section for success stories.
